

A2
Sub B1 13. (Amended) An apparatus for wireless communication for non-latency-dependent data, the apparatus comprising:

- (a) a processor; and
- (b) a memory coupled to said processor, said memory storing instructions adapted to be executed on said processor, said instructions including:
 - (i) receiving data for transmission to a base station;
 - (ii) determining whether the data is appropriate for transmission over a digital control channel;
 - (iii) if the data is appropriate for transmission over a digital control channel, queuing the received data for transmission;
 - (iv) monitoring network conditions for conditions favorable for transmission; and
 - (v) transmitting the data over a digital control channel when network conditions are favorable for transmission.

A2
Sub B1 19. (Amended) A medium for wireless communication for non-latency-dependent data, the medium storing instructions adapted to be executed a processor, the instructions comprising:

- (a) receiving data for transmission to a base station;
- (b) determining whether the data is appropriate for transmission over a digital control channel;
- (c) if the data is appropriate for transmission over a digital control channel, queuing the received data for transmission;
- (c) monitoring network conditions for conditions favorable for transmission; and
- (d) transmitting the data over a digital control channel when network conditions are favorable for transmission.
